The MTA range – part of the Grundfos portfolio

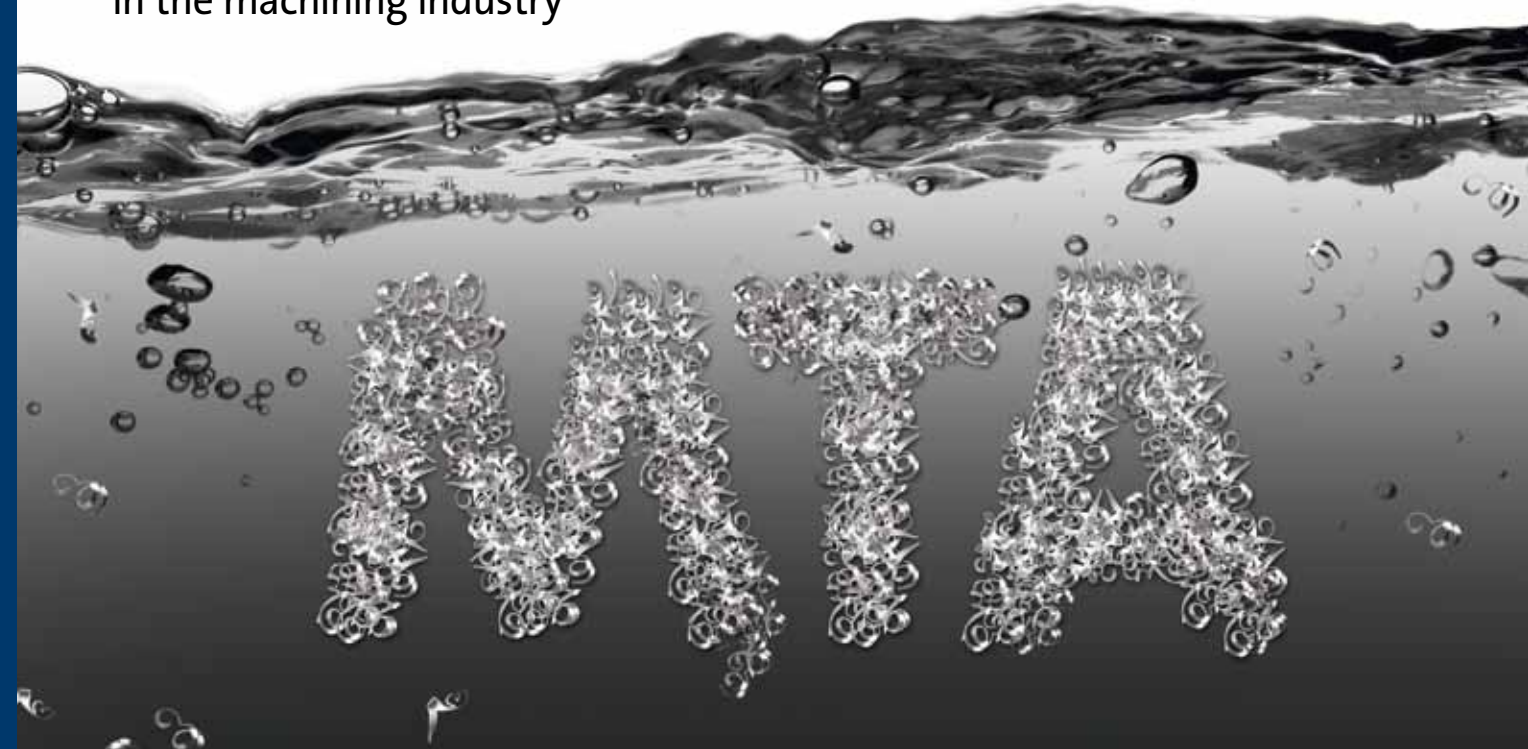

The single-stage immersible pumps that make up the MTA range are ideal for filtering systems in the machine tool industry. They are part of the much wider Grundfos portfolio of pump technology, systems, and solutions. Key areas served within the machine tool industry include:

- Boring
- Sawing
- Milling
- Cooling
- Grinding

GRUNDFOS 

Double up on reliability

The brand new MTA range allows you to benefit from the renowned Grundfos reliability on both sides of the machining station. In addition to handling the cooling and cleaning of tools inside the machine, we are now able to pump the dirty liquid to the filtering system. No matter what it contains.

The low pressure MTA range has been designed for filtering systems in the machine tool industry. Available in 9 different flow variants and in a variety of lengths you are guaranteed to find a pump solution that perfectly matches your system requirements. Moreover, the range comes with a choice of top or bottom suction.

Semi-open impellers ensure that liquid containing fibres, abrasive particles and chips up to 10 mm is safely moved along to the filtering unit. And the best part is that the entire range is easily installed. Even replacements of competing products can be carried out without any inconvenience.

So there really is every reason to take advantage of this new addition to Grundfos' wide range. You save time – and benefit from the recognised Grundfos reliability on both sides of the machining station.

MTA highlights

A choice between
bottom or top suction

Easy installation
– even in replacements of
competing products

Semi-open impellers allow the
passing of chips up to 10 mm

Full-line supplier – Grundfos
offers pumping solutions for both
sides of the machining station
